HARVARD UNIVERSITY

MARCIA MCNUTT is a geophysicist and president of the National Academy of Sciences. From 2013 to 2016, she served as editor-in-chief of the *Science* family of journals. Prior to joining *Science*, she was director of the U.S. Geological Survey from 2009 to 2013. During her tenure, the USGS responded to a number of major disasters, including earthquakes in Haiti, Chile, and Japan, and the Deepwater Horizon oil spill. McNutt led a team of government scientists and engineers at BP headquarters in Houston who helped contain the oil and cap the well. She directed the flow rate technical group that estimated the rate of oil discharge during the spill's active phase. For her contributions, she was awarded the U.S. Coast Guard's Meritorious Service Medal. Before joining the USGS, McNutt served as president and chief executive officer of the Monterey Bay Aquarium Research Institute, in Moss Landing, California. McNutt served as president of the American Geophysical Union from 2000 to 2002. She was chair of the Board of Governors for Joint Oceanographic Institutions, and is a fellow of AGU, the Geological Society of America, American Association for the Advancement of Science, and International Association of Geodesy.
